

Do you want to see a single atom?

The Ultracold Atoms Group led by Dr. Georgios Siviloglou of the Shenzhen Institute for Quantum Science and Engineering (SIQSE) is looking for **two (2) highly motivated students** to work in a new experiment with the goal to image and manipulate at the single atom level ultracold gases.

Possible projects: optical design, electromagnets, electronics, lasers, CAD, and imaging software.

If you are interested to learn about our work, you can email directly Georgios Siviloglou.
